

Single sign-on configuration service for spend management and SAP Business Network solutions

Streamline Identity Management

Challenges or needs

- Multiple log-in processes for different applications.
- Simplify user onboarding and off-boarding on your SAP applications
- Prerequisite for enabling innovations and applications
- Connect SAP spend management and SAP Business Network for Procurement solutions to your company's identity provider

Solution

- SAP experts review single sign on details and provide additional details, if required
- SAP experts will work with your team to enable authentication between your company's Identity Provider and the SAP spend management or SAP Business Network for Procurement solution
- Knowledge transfer to hand over information to your team.

Business outcomes

- Improved and seamless login experience to SAP spend management solutions or the SAP Business Network for your users by allowing the use of their enterprise credentials.
- Enable SAP spend management solutions or the SAP Business Network for Procurement to authenticate users with your Identity Provider.
- Decrease IT Support Costs by reducing the need for help desk resources to support the resetting of passwords.
- Prepare your environment to take advantage of new innovations as part of the SAP Business Suite.
